

Introduction to Website development

Task 3 -Evaluation & Testing

Homepage		
Input	Process	Output
User clicks on upcoming album image	Album card is loaded	Countdown timer starts

User profile		
Input	Process	Output
User presses edit profile button	Expected page will be load	User will be able to edit profile

Album page		
Input	Process	Output
User clicks on text bubble icon	Comments load from side menu	User can post a comment

Upcoming albums page		
Input	Process	Output
User clicks on upcoming album image	Album card is loaded	Countdown timer starts

New release page		
Input	Process	Output
User can sort by latest to oldest releases	- It is unclear how to proceed	-

User clicks on album	Album page is loaded	List of album songs is visible
----------------------	----------------------	--------------------------------

Test cases					
page	Description	Expected output	Actual output	Pass or fail	notes
Homepage	User clicks on upcoming album icon, and countdown menu is displayed	Countdown menu is displayed once user clicks album icon	Countdown menu is displayed once user clicks album icon	pass	
Profile	User clicks on the edit profile button and can adjust their profile	Button gives user the ability to change profile	No output was implemented	fail	
Album	User clicks on speech bubble icon, and a side menu is displayed allowing the user to be able	Menu is displayed	Menu is displayed	pass	

	to add a comment or review				
Upcoming album page	User clicks on an upcoming album, and the countdown should be displayed accordingly	Countdown menu should be displayed	Countdown menu is displayed	pass	
New releases	User clicks on album icon to view album details, or songs	Album songs are displayed	Album songs are displayed	pass	
New releases	User can filter to view latest album releases	Not clear	Not clear	Fail	The function for the user to be able to filter the latest released albums was listed in task 1, although in both the wireframes, and the website there is no clear indication of how this can be done.

Code validation

Contact page = validated

Friendone.html and friendtwo.html pages = validated

New album 2-11 = validated

Personone-five = validated

Pop-albumtwo-twelve = validated

Rock-albumtwo-twelve = validated

Index validation

- Instead of size, should have used em.

Error

CSS: `size` Property `size` doesn't exist.

From line 129, column 7; to line 129, column 78

```
e">
    <button class="back-btn" onclick="closeAlbumModal()"
style="size: 20%;">
```

Error

Element `img` is missing one or more of the following attributes: `src`, `srcset`.

From line 134, column 9; to line 134, column 68

```
>
    <img id="modalImg" alt="Album Cover style='size: 20%;'>"
/>
```

Attributes for element `img`:

Global attributes

`alt` — Replacement text for use when images are not available

`src` — Address of the resource

`srcset` — Images to use in different situations, e.g., high-resolution displays, small monitors, etc.

`sizes` — Image sizes for different page layouts

`crossorigin` — How the element handles crossorigin requests

`usemap` — Name of [image map](#) to use

`ismap` — Whether the image is a server-side image map

`controls` — Show user agent controls

`width` — Horizontal dimension

`height` — Vertical dimension

`referrerpolicy` — [Referrer policy](#) for [fetches](#) initiated by the element

`decoding` — Decoding hint to use when processing this image for presentation

`loading` — Used when determining loading deferral

`fetchpriority` — Sets the [priority](#) for [fetches](#) initiated by the element

New.html

Error The `main` element must not appear as a descendant of the `main` element.

[From line 68, column 5; to line 68, column 31](#)

```
-->↵↵ <main class="main-content">↵
```

Error A document must not include more than one visible `main` element.

[From line 68, column 5; to line 68, column 31](#)

```
-->↵↵ <main class="main-content">↵
```

Pop.html

Error The `main` element must not appear as a descendant of the `main` element.

[From line 67, column 5; to line 67, column 31](#)

```
-->↵↵ <main class="main-content">↵
```

Error A document must not include more than one visible `main` element.

[From line 67, column 5; to line 67, column 31](#)

```
-->↵↵ <main class="main-content">↵
```

Rock.html

Error The `main` element must not appear as a descendant of the `main` element.

[From line 67, column 5; to line 67, column 31](#)

```
-->↵↵ <main class="main-content">↵
```

Error A document must not include more than one visible `main` element.

[From line 67, column 5; to line 67, column 31](#)

```
-->↵↵ <main class="main-content">↵
```

Upcoming.html

Error CSS: `size`: Property `size` doesn't exist.
[From line 136, column 7; to line 136, column 78](#)

```
e">␣<button class="back-btn" onclick="closeAlbumModal()" style="size: 20%;">␣
```

Error Element `img` is missing one or more of the following attributes: `src`, `srcset`.
[From line 141, column 9; to line 141, column 67](#)

```
>␣<img id="modalImg" alt="Album Cover" style='size: 20%;'> />␣
```

Attributes for element `img`:

- [Global attributes](#)
- [alt](#) — Replacement text for use when images are not available
- [src](#) — Address of the resource
- [srcset](#) — Images to use in different situations, e.g., high-resolution displays, small monitors, etc.
- [sizes](#) — Image sizes for different page layouts
- [crossorigin](#) — How the element handles crossorigin requests
- [usemap](#) — Name of [image map](#) to use
- [ismap](#) — Whether the image is a server-side image map
- [controls](#) — Show user agent controls
- [width](#) — Horizontal dimension
- [height](#) — Vertical dimension
- [referrerpolicy](#) — [Referrer policy](#) for [fetches](#) initiated by the element
- [decoding](#) — Decoding hint to use when processing this image for presentation
- [loading](#) — Used when determining loading deferral
- [fetchpriority](#) — Sets the [priority](#) for [fetches](#) initiated by the element

Most of the Code is validated, aside from some minor issues.

Suggestions for further development

While most of the tests resulted in a successful pass. There are some issues with the general sizing of the website. To be able to view the whole frame the user is required to scroll up, down and side to side. This is bad for the users experience as it makes the website not user friendly by it being harder to navigate through. I think it would have been beneficial to add a footer as it adds to the website's credibility and makes it more efficient. The contact form should have been placed in a different area, instead of being displayed when the user hovers over the profile icon. It would have made more sense to add the footer for extra information and have the contact form be a part of the footer. For all the pages which are displaying the albums, it would have made more sense if the user would have been able to interact with the albums by making it either a carousel, or being able to shuffle the albums, ex, three albums are displayed, the user wants to see what other albums there are so they can shuffle by a button placed on the side. I think this might be better as the user is not faced with being overwhelmed by having 12 albums to choose from at once. Allowing the user to shuffle, or flip through the options would keep them engaged and more interested to see more, while having everything displayed all at once might be overwhelming and could become boring for some users. For the liked albums in the profiles, I think the comments/review section is a great way to connect users to one another, although I think that it would have been relevant to add playback controls, to indicate the possibility to play the albums.
